### **2. Scope of the NFT TAX TRACKER service**

The NFT TAX TRACKER is a tool enabling you:

- (1) to automate the calculation of the overall profit or loss you made from buying and selling NFT’s during a certain period (for example during one fiscal year), including the generation of certain, more detailed overviews thereof;
- (2) to automatically convert the aforementioned profit or loss made with NFT- transactions from crypto currency to official currency (such as US Dollar or Euro).

(All of the output generated by the NFT TAX TRACKER hereinafter referred to as the “Output”.)

To generate the Output, NFT TAX TRACKER makes use of information from the following databases:

- (1) To identify the transactions with regard to your NFT’s during the selected period: your own NFT wallet(s), it being understood that you will need to authorize us to read out the list of NFT’s and related transactions during the requested period by providing us

with your wallet(s) address(es). (To be clear: by authorizing us to read out your wallet(s), we just “read” your NFT-list and information with regard to the related transactions during the relevant period from you wallet(s); we do not touch your wallet(s) in any other way.)

- (2) To enable NFT TAX TRACKER to automatically convert profit or loss from your NFT-transactions from crypto currency to official currency (taking into account the date and time of each of said transactions during the relevant period): the “CoinGecko” database (<https://www.coingecko.com/>).
